## 2.3 Measurement Uncertainty

**Table 3: Emission Measurement Uncertainty**

| Parameter                     | Uncertainty |
|-------------------------------|-------------|
| Occupied Channel Bandwidth    | ± 5 %       |
| RF power, conducted           | ± 1.5 dB    |
| RF power density, conducted   | ± 3 dB      |
| unwanted emissions, conducted | ± 3 dB      |
| all emissions, radiated       | ± 6 dB      |
| Temperature                   | ± 1 °C      |
| Humidity                      | ± 5 %       |
| DC and low frequency voltages | ± 3 %       |
| Time                          | ± 5 %       |
| Duty Cycle                    | ± 5 %       |

## General Product Information

## 2.4 Product Function and Intended Use

The EUT is a Bluetooth module. It contains a Bluetooth 4.2 (BLE/BR/EDR) compatible module enabling the user to communicate data through a Wireless interface.  
For details refer to the User Guide, Data Sheet and Circuit Diagram.

## 2.5 System Details

**Table 4: Technical Specification of EUT**

| Technical Specification   | Value                         |
|---------------------------|-------------------------------|
| Kind of Equipment         | Bluetooth module              |
| Operating Frequency       | 2402~2480 MHz                 |
| Channel Spacing           | 2 MHz                         |
| Channel number            | 40                            |
| Extreme Temperature Range | -20~70 °C                     |
| Operation Voltage         | 3.3 V ~ 4.2V (Tested at 3.3V) |
| Modulation                | GFSK                          |
| Antenna gain              | 1.63 dBi                      |

## 2.6 Independent Operation Modes

Testing was performed at the lowest operating frequency (2402MHz), at the operating frequency in the middle of the specified frequency band (2440MHz) and at the highest operating frequency (2480MHz).

The basic operation modes are:

- A. EUT transmits (TX mode), with full power, at lowest channel (2402MHz), a continuous modulated signal streaming with 100% duty cycle.
- B. EUT transmits (TX mode), with full power, at middlest channel (2440MHz), a continuous modulated signal streaming with 100% duty cycle.
- C. EUT transmits (TX mode), with full power, at highest channel (2480MHz), a continuous modulated signal streaming with 100% duty cycle.
- D. EUT receives (RX mode), at lowest channel (2402MHz), continuously.
- E. EUT receives (RX mode), at highest channel (2480MHz), continuously.
- F. Transmitter is in stand-by.
- G. EUT link operation in pseudo-random sequence on all channels (hopping mode )
- H. EUT in link mode, at lowest channel (2402MHz)
- I. EUT in link mode, at highest channel (2480MHz)

## 2.7 Noise Suppressing Parts

Nothing mentioned explicitly.

## 3 Test Set-up and Operation Modes

### 3.1 Principle of Configuration Selection

**Radio:** The equipment under test (EUT) was configured at its highest power output in order to measure its highest possible radiation and conducted level. The test modes were adapted accordingly in reference to the instructions for use.

### 3.2 Test Operation and Test Software

Software used for testing: Test samples are provided with a data interface which makes it possible to control them through a test software installed on a notebook computer.

This software was running on the laptop computer connected to the EUT. It was used to enable the operation modes listed in section 2.6 as appropriate.

### 3.3 Special Accessories and Auxiliary Equipment

The product has been tested together with the following additional accessories:

| Description      | Manufacturer | Model No. | Serial No. |
|------------------|--------------|-----------|------------|
| Notebook(EMC-06) | Lenovo       | TP00048A  | PB-0F8B2   |

## 4 Test Results RADIO

### 4.1 Conformance Requirements

#### 4.1.1 Receiver Blocking

**RESULT:** PASS

Date of testing: 27-Apr-2017

Atmospheric pressure: 100-103 kPa

Test requirement: EN 300 328 V 2.1.1, clause 4.3.2.11

Test procedure: EN 300 328 V 2.1.1, clause 5.4.11

Test modes applied: H, I

Limit:

While maintaining the minimum performance criteria as defined in EN300328 v2.1.1 clause 4.3.2.11.3, the blocking levels at specified frequency offsets shall be equal to or greater than the limits defined for the applicable receiver category provided in table 14, table 15, table 16.

Receiver category 1:

Adaptive equipment with a maximum RF output power greater than 10 dBm e.i.r.p. shall be considered as receiver category 1 equipment.

Receiver category 2:

Non-adaptive equipment with a Medium Utilization (MU) factor greater than 1 % and less than or equal to 10 % or adaptive equipment with a maximum RF output power of 10 dBm e.i.r.p. shall be considered as receiver category 2 equipment.

Receiver category 3:

Non-adaptive equipment with a maximum Medium Utilization (MU) factor of 1 % or adaptive equipment with a maximum RF output power of 0 dBm e.i.r.p. shall be considered as receiver category 3 equipment.

**Table 14: Receiver Blocking parameters for Receiver Category 1 equipment**

| Wanted signal mean power from companion device (dBm) | Blocking signal frequency (MHz)                                | Blocking signal power (dBm) (see note 2) | Type of blocking signal |
|--|--|--|-------------------------|
| $P_{\min} + 6 \text{ dB}$                            | 2 380<br>2 503,5   | -53                                      | CW                      |
| $P_{\min} + 6 \text{ dB}$                            | 2 300<br>2 330<br>2 360  | -47                                      | CW                      |
| $P_{\min} + 6 \text{ dB}$                            | 2 523,5<br>2 553,5<br>2 583,5<br>2 613,5<br>2 643,5<br>2 673,5 | -47                                      | CW                      |

NOTE 1:  $P_{\min}$  is the minimum level of the wanted signal (in dBm) required to meet the minimum performance criteria as defined in clause 4.3.2.11.3 in the absence of any blocking signal.

NOTE 2: The levels specified are levels in front of the UUT antenna. In case of conducted measurements, the levels have to be corrected by the actual antenna assembly gain.

**Table 15: Receiver Blocking parameters receiver category 2 equipment**

| Wanted signal mean power from companion device (dBm) | Blocking signal frequency (MHz) | Blocking signal power (dBm) (see note 2) | Type of blocking signal |
|--|---------------------------------|--|-------------------------|
| $P_{\min} + 6 \text{ dB}$                            | 2 380<br>2 503,5                | -57                                      | CW                      |

**Receiver Blocking Test Result :**

According to 10052796 001 (v1.9.1) report this device maximum RF output power less than or equal to 10dBm e.i.r.p. shall be considered as receiver category 2 equipment.

**BLE (2402MHz)**

| Receiver Blocking                                   |                                |                      |                       |           |
|---|--------------------------------|----------------------|-----------------------|-----------|
| Wanted signal mean power from Companion Device(dBm) | Blocking Signal Frequency(MHz) | Blocking Level (dBm) | Packet Error Rate (%) | Limit (%) |
|   |                                |                      | BLE                   |           |
| Pmin + 6 dB   | 2380                           | -57                  | 0.13333               | < 10      |
|   | 2503.5                         | -57                  | 0                     |           |
| Pmin + 6 dB   | 2300                           | -47                  | 0                     | < 10      |
|   | 2583.5                         | -47                  | 0                     |           |

Remark : During evaluation we found the minimum Pmin level of wanted signal is -91 dBm.

**BLE (2480MHz)**
